	Urgent	Not Urgent
Important	Do - (YOUR MVP) ● Hard code a small list of books ● Java code that takes the data and complies ● Have it be able to run in the terminal and give those 15 recommendations	Schedule - (For V2.0+) ● Add the option of choice for genre ● Add more data for the books (like possible websites to buy it from or short descriptions) ● Add color and format it nicely ● Book ratings
Not Important	Delegate - (Use a library) ● Get data from a public API ● Turn it readable using json ● Use a Scanner for input (make sure it can handle all inputs)	Delete - (Cut it) ● Add more than books, possibly types of articles ● Add images of the book cover ● Use a database to store information ● Search by author not type of book
